

DANTE SERIES GAS CHARBROILER

GLO-STONES/RADIANT C, F, L

Installation and Operation Instructions

2M-Z24018 Rev. A 05/21

TO THE PURCHASER, OWNER AND STORE MANAGER

Please review these warnings prior to posting them in a prominent location for reference.

TO THE PURCHASER

Post in a prominent location the instructions to be followed in the event that an operator smells gas. Obtain this information from your local gas supplier.

FOR YOUR PROTECTION

DO NOT store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance. Do not spray aerosols in the vicinity of this appliance when it is in operation.

WARNING

Improper installation, adjustment, operation, alteration, service or maintenance can cause property damage, injury or death. Read the installation, operating and maintenance instructions thoroughly before installing, operation, servicing this appliance.

WARNING

Installation, maintenance and repairs should be performed by a BP Authorized Service and Parts (ASAP) company technician or other qualified personnel. Installation, maintenance or repairs by an unauthorized and unqualified personnel will void the warranty.

WARNING

Installation and all connections must be made according to local codes in force. In the absence of local codes in North America, the installation must conform with the National Fuel Gas Code, ANSI Z223.1/NFPA 54 or the Natural Gas and Propane Installation Code CSA B149.1 as applicable. In Australia, the appliance must installed in compliance with AS/NZS 5601.

WARNING

During the warranty period if a customer elects to use a non-original part or modifies an original part purchased from Bakers Pride and/or its Authorized Service and Parts (ASAP) companies, this warranty will be void. In addition, Bakers Pride and its affiliates will not be liable for any claims, damages or expenses incurred by the customer which arises directly or indirectly, in whole or in part, due to the installation of any modified part and/or received from an unauthorized service center.

WARNING

Adequate means must be provided to LIMIT the movement or this appliance without depending on the gas or electrical cord connection. Single appliances equipped with legs must be stabilized by installing anchor straps. All appliances equipped with casters must be stabilized by installing restraining chains.

WARNING

An appliance equipped with casters and a flexible gas line must be connected to the gas supply with a quick disconnect device. In North America this quick disconnect must comply with ANSI Z24.41. In Australia, the quick disconnect must comply with AS 4627.

WARNING

DO NOT alter or remove structural material on the appliance to accommodate placement under a ventilation hood.

WARNING

The appliance is NOT jet stream approved. DO NOT clean the appliance with a water jet.

WARNING

DO NOT use an open flame to check for gas leaks! NOT sit or stand on this appliance. The appliance's front panel, tank, splash back, tank cover, workshelf, drain board is not a step. Serious injury could result from slipping, falling or contact with hot surface.

WARNING

NEVER use the appliance as a step for cleaning or accessing the ventilation hood. Serious injury could result from slips, trips or from contacting hot surface.

WARNING

This appliance is intended for indoor use only.

WARNING

DO NOT operate appliance unless all panels and access covers are attached correctly.

WARNING

It is recommended that this appliance be inspected by a qualified service technician for proper performance and operation on a yearly basis.

WARNING

There is an open flame inside this appliance. The unit may get hot enough to set nearby materials on fire. Keep the area around the appliance free from combustibles.

WARNING

DO NOT supply the appliance with a gas that is not indicated on the data plate. If you need to convert the appliance to another type of fuel, contact your dealer.

WARNING

If gas flow to appliance is interrupted, or pilots extinguish, wait 5 minutes before attempting to relight the pilot to allow any residual gas in appliance to dissipate.

WARNING

Ensure that the appliance can get enough air to keep the flame burning correctly. If the flame is starved for air, it can give off a dangerous carbon monoxide gas. Carbon monoxide is a clear odorless gas that can cause suffocation.

WARNING

This appliance is intended for professional use only and should be operated by fully trained and qualified personnel.

WARNING

In North America, gas appliances equipped with casters must be installed with connectors that comply with the Standard for Connectors for Movable Gas Appliances, ANSI Z21.69.CSA 6.16 Latest Edition. This connection should include a quick disconnect device that complies with the Standard for Quick Disconnect Devices for Use With Gas Fuel ANSI Z21.41.CSA 6.9 Latest Edition. In Australia, an appliance equipped with casters and a flexible gas line must be connected to the gas supply with a quick disconnect device that complies with AS 4627 and a restraining cable. The restraining cable must not exceed 80% of the length of the flexible gas line.

WARNING

This appliance is not intended for use by person (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance

This appliance must be installed to the requirements of AS/NZS5601.1, local gas and electric authority and any other relevant statutory regulations.

The appliances covered by this manual are for use only with the gas type displayed on the data plate.

This appliance is for installation in non-combustible locations only.

Normal Gas Consumption of Models:

(F, C, L) 24R	66 MJ/h
(F, C, L) 36R	115.5 MJ/h
(F, C, L) 48R	165 MJ/h
(F, C, L) 60R	214.5 MJ/h
(F, C, L) 72R	264 MJ/h

Test Point Pressure:

Natural Gas	1.0 kPa
Propane	2.5 kPa

Approximate Overall Dimensions and Weights

Type	Model	Height with Legs (cm)	Width (cm)	Depth (cm)	Shipping Weight (kg)	Total Cook Area (cm ²)
F	24R	100	61	90	99.7	3,314
	36R	100	91	90	133	5,233
	48R	100	122	90	192	7,145

	36R	64.5	91	90	159	5,233
	48R	64.5	122	90	193	7,145
	60R	64.5	152	90	256	9,063
	72R	64.5	183	90	320	11,001
L	24R	54.1	61	90	95.2	3,314
	36R	54.1	91	90	159	5,233
	48R	54.1	122	90	193	7,145
	60R	54.1	152	90	256	9,063
	72R	54.1	183	90	320	11,001

The gas supply connection to this appliance is located in the rear of the appliance approximately 54 cm from the base of the appliance for F models, 23 cm from the base for C models, and 13 cm for L models.

If this appliance cannot be adjusted to perform correctly contact your local authorized service company or call the factory at the number on the back page of this manual.

INSTALLATION

Units are to be installed in non-combustible locations only to utilize a 0" (0 mm) minimum clearance to non-combustible construction. Not approved for installations in combustible constructions. In North America this installation must conform to local codes. In the absence of local codes, the installation must conform with the National Fuel Gas Code, ANSI Z223.1: Natural Gas Installation Code, CAN/CGA B149.1; or Propane Installation Code CAN/CGA B149.2 as applicable.

- The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psi (3.45 kPa).
- The appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psi (3.45 kPa).
- Uncrate unit and put into place. The hitch pins securing burners must be removed. This will permit the burners to be readily removed for weekly inspection, cleaning and future service.
- **FOR INSTALLATION ON LEGS:** A set of 6" legs is packed in the top section of the broiler (unless unit is specifically ordered without). A threaded receptacle is located near each corner base of the machine. Each leg has a similar mating thread. Raise unit sufficiently to allow legs to be screwed tightly into receptacles. Level the unit by adjusting bottom feet of legs. Unit must be level to perform properly. **FOR INSTALLATION WITH CASTERS:** This installation shall be made with a connector that complies with the Standard for Connectors for Movable Gas Appliances, ANSI Z21.69, or Connectors for Movable Gas Appliances, CAN/CGA-6.16, and with a quick-disconnect device that complies with the Standard for Quick-Disconnect Devices for Use With Gas Fuel, ANSI Z21.41, or Quick-Disconnect Devices for Use With Gas Fuel, CAN1-6.9 (North America).
- Provide an adequate means of restraint without depending on the gas connector, the quick-disconnect device or its associated piping to limit the appliance movement.
- The restraint (i.e. heavy gauge chain or cable) should be 1000# (4.45 kN) test load and should be attached to the building structure by some substantial means, such as the use of anchor bolts into concrete, or lag screws into studs in wooden structures. The opposite end of the restraint should be affixed solidly to the base of the unit at the back where it will not become pulled out or cause damage to the appliance.
- If disconnection of this restraint becomes necessary at any time, make sure it is reinstalled after the unit is placed in its original position and before the unit is placed in operation.

CAUTION!

- Only two of the four casters supplied have brakes. Be sure to install the two casters with brakes at the front of the unit. NOTE: Front brakes should be locked before unit is placed in operation.
- **COUNTER MODELS:** All counter equipment is to be sealed to the counter to comply with applicable sanitation standards. A bead of silicone sealant, approximately 1/2" (13 mm) wide, is to be applied to the bottom of the unit approximately 1/4" (6.5 mm) in from the front, back and side edges.
- We suggest a Dow Corning®, GE® or Permatex® silicone 'RTV' adhesive sealant or equivalent. (See NSF Basic Criteria C-2 for details).

GAS HOOK UP

An adequate gas supply is imperative. Undersized lines or low-pressures will restrict the volume of gas required for satisfactory performance. A steady supply pressure between 7" and 8" w.c. (1.75 and 2 kPa) for natural gas or 11" to 12" w.c. (2.75 to 3.0 kPa) for propane gas is required. With all gas appliances operating simultaneously, the manifold pressure on any appliance should not show any appreciable drop. Fluctuations of more than 25% on natural and 10% on propane gas will create pilot problems, and affect burner-operating characteristics. Contact your gas company for correct supply line sizes. After connection, all newly installed equipment should be checked for correct gas pressure by a certified gas serviceman. The unit should be connected **ONLY** to the type of gas for which it is equipped. Check the type of gas on serial plate.

- A. Attach regulator supplied with machine to inlet of the gas manifold. Be sure regulator is connected so that gas flow is in the direction of the arrow on the bottom of the regulator. Using a regulator other than the one supplied with the unit will void the warranty.
- B. The manifold pressure must be maintained at the pressure marked on the serial plate: 4" w.c. (1.0 kPa) for natural gas and 10" w.c. (2.5 kPa) for propane gas.
- C. Use pipe joint compound that is suitable for use with LP gas on all threaded connections.
- D. Turn off all burner valves.
- E. Turn on gas supply and check all connections for leaks using **ONLY** a leak checking fluid or soapy water. **NEVER** use an open flame to check for gas leaks.
- F. Provision must be made for adequate air supply for both appliance and occupants.
- G. Keep area in front of unit free from obstructions that could block flow of combustion and ventilation air.
- H. Be certain that adequate clearance is maintained so that air openings in front of unit are not blocked and any subsequent service can be performed. No such clearance is required on the sides. Sufficient clearance at rear is required for gas connections, regulator, and any master shutoff valve(s) installed. Be sure there is no obstruction in front.

GAS SETTINGS

Regulator pressure must be measured and adjusted before the unit goes into service, following installation and when operational performance is in question. A soft blue flame, just short of a yellow tip, gives the best results; combustion air can be adjusted by opening or closing the air shutter slightly.

LIGHTING INSTRUCTIONS:

Regulator pressure must be measured and adjusted before the unit goes into service, following installation and when operational performance is in question. A soft blue flame, just short of a yellow tip, gives the best results; combustion air can be adjusted by opening or closing the air shutter slightly.

Radiant Series C, F, L Models without safety pilot

- A. Turn all burners to OFF.
- B. Remove the top grid(s).
- C. Remove the last radiant(s) closest to

SK2975

- D. Turn the runner tube valve to ON.
- E. Light the runner tube. (*Note: If the runner tube does not light, wait a the side(s) of the unit. few seconds, then try again.*)

SK2976

- F. Replace the radiant(s) and top grid(s). Push and turn the burner valves to operate the individual burners as needed.
- G. If any burner fails to light from the runner tube, shut off all the burners and the runner tube. Do not attempt to re-light for five minutes after shutdown. Repeat steps a thru f. If unit still fails to operate properly, contact authorized service personnel.

Broiler Shut Down

Turn all burners to OFF.

Turn the runner tube valve to OFF.

GLO-STONES C, F, L SERIES MODELS WITHOUT SAFETY PILOT

- A. Turn all burners to OFF.
- B. Remove the top grid(s).
- C. Turn the runner tube valve to ON.
- D. Light the runner tube through the gap in the front of the coal support as shown. (Note: If the runner tube does not light, wait a few seconds, then try again.)

SK2977

- E. Replace the top grid(s). Push and turn the burner valves to operate the individual burners as needed.
- F. If any burner fails to light from the runner tube, shut off all the burners and the runner tube. Do not attempt to re-light for five minutes after shutdown. Repeat steps a thru f. If unit still fails to operate properly, contact authorized service personnel.

Broiler Shut Down

Turn all burners to OFF.

Turn the runner tube valve to OFF.

GLO-STONES C, F, L SERIES MODELS WITH SAFETY PILOT

- A. Turn all burners to OFF.
- B. Remove the top grid.
- C. Remove a radiant.
- D. Turn the shut off valve to ON.
- E. Press and hold the reset (blue) button on the safety pilot valve. Wait 15-30 seconds. Light the runner tube. *DO NOT* release the reset button. *(NOTE: If the runner tube does not light, wait a few seconds, then try again. NOTE: When lighting the runner tube for the first time after connecting the unit to the gas source, the light time will probably increase to 1-2 minutes.)*
- F. Wait an additional 15-30 seconds. Release the reset button. The runner tube should remain lit. *(NOTE: If the runner tube fails to ignite, repeat step 5. If the runner tube fails to ignite after three attempts, contact an authorized Bakers Pride service agent.)*
- G. Replace the radiant and top grid.
- H. Push and turn the burner valves to operate the individual burners as needed.

Broiler Shut Down

Turn all burners to OFF.

Turn the runner tube valve to OFF.

Glo-Stones C, F, L Series -S Models with safety pilot

Lighting and shut down of these models is identical to that of the RMB-S models except that there are no radiants to be removed. Simply light the runner tube by inserting the ignition device through the gap between the front burner support and the coal support as shown in the lighting instructions for the **Glo-Stones C, F, L Series Models without safety pilot**.

INITIAL SET-UP

All Models

PROPER SET UP OF THE BROILER - After the installation of the broiler by a qualified technician, a thorough cleaning is necessary. After this cleaning, be sure the broiler is set up properly.

TOP GRID - Your top cooking grid has two positions, either flat or tilted. Whenever you are broiling, you must use the tilted position. This allows grease to drain into the front trough, reducing both smoke and flare-up. Simply push down on the top grid handle and pull forward to set the tilted position.

10501-B1.WMF
SK2980

2M-Z24018: Bakers Pride - Dante Series Gas Charbroiler

RADIANT C, F, L SERIES MODELS

STAINLESS STEEL RADIANT - It is very important that the stainless steel radiants are placed over the burners. This will provide radiant heat and protect the burners from dripping grease.

PREHEATING - It is necessary to preheat a cold broiler each time before cooking. The recommended time is 3-5 minutes for radiant style charbroilers, at which time the cooking grid should be hot enough to cook on without sticking, and will produce the proper searing effect.

GLO-STONES C, F, L SERIES MODELS

COAL SUPPORT - The coal support must be installed so that it is pushed against the back wall of the unit. This creates an air gap over the runner tube to allow proper ventilation.

COALS - Use only Glo-Stones supplied by Bakers Pride. Do not use lava rock or other replacement coals. They do not perform as well or last as long as the Glo-Stones that were designed for this application. Place the coals evenly across the surface of the coal support. Do not pile them up. This will cause excessive flare up, reduce ventilation, and cause overheating of the valves and other components.

PREHEATING - It is necessary to preheat a cold broiler each time before cooking. The recommended time is 15-20 minutes for coal style charbroilers, at which time the cooking grid should be hot enough to cook on without sticking, and will produce the proper searing effect.

All Models

FLARE-UP - A certain amount of flare-up is desirable when you are charbroiling in order to flavor your products. However, excess flare-up will burn your products and leave a bitter taste. With flare-up, one simple formula holds true. The hotter the broiler and the higher the fat content of the food, the more flare-up you will have. Conversely, the lower the heat and lower the fat content, the less flare-up you will have.

FLARE-UP PROBABILITY CHART		
Heat Level	High Fat Content	Low Fat Content
High Heat	High	Moderate
Low Heat	Moderate	Low

CLEANING AND MAINTENANCE

DAILY CLEANING AND MAINTENANCE

TOP GRID - The top grid can be cleaned in numerous ways. The recommended procedure is to remove the grid and clean the frame, tubes and angles on front, sides and back with steel wool. The rods need only be scraped free of all cooking debris, especially the underside of the rods, using the Bakers Pride scraper provided. The light oily sheen will aid in cooking, acting like a seasoned iron skillet.

OUTER SIDES AND FRONT - The outer sides and front are stainless steel. Any reputable cleaner can be used to clean these surfaces.

INNER COOKING AREA - These surfaces are also stainless steel. A paste type oven cleaner will work best to clean them, but be sure to remove all residues before you resume cooking operation. The grease collection pan should be emptied daily and the grease disposed of properly.

WATER TUB - The water tub is designed to reduce flair-up and to eliminate flash back, which is common on radiant style charbroilers. Flaming grease which drips down will extinguish as soon as it hits the water. The water tub should never be allowed to run dry and should be emptied daily and the grease disposed of properly.

Maintaining a clean, well-kept broiler will ensure long-lasting cooking performance and prolong it's life.

WEEKLY CLEANING MAINTENANCE

Generally, with this style broiler, you can follow the directions for daily cleaning. However, your top grid can be soaked in a detergent degreasing solution weekly or monthly. After this soaking, your grid will need to be thoroughly rinsed with fresh water and then re-seasoned.

IMPORTANT OPERATION INSTRUCTIONS RECAP

1. Always cook in a tilted position. This will allow excess grease to drain into the front grease trough and reduce smoke and flare-up.
2. Keep the top cooking grids clean, especially the underside of the rods. This will insure that the grease will drain toward the front grease trough.

Remember the following formula for flare-up:
High Heat + High Fat Content = Maximum Flare-up
Low Heat + Low Fat Content = Minimum Flare-up

ANNUAL MAINTENANCE AND INSPECTION

Disconnect all gas sources before you perform this procedure. The unit should be inspected annually by a qualified gas appliance service personnel.

The main burner valves should be greased annually, or as necessary, to maintain smooth operation and prevent gas leakage.

1. Remove the knobs from the front of the unit.
2. Remove the outer front panel.
3. Loosen the two screws securing the collar to each valve.
4. Carefully disassembly the valves. See Figure 6.
5. Clean all parts.
6. Apply high temperature valve grease to the rotor assembly.

NOTE: The valve grease must be suitable for all gas types. Reassemble the valves and broiler.

2M-Z24018: Bakers Pride - Dante Series Gas Charbroiler

LIMITED EQUIPMENT WARRANTY

Baker's Pride warrants to the original purchaser of new Baker's Pride products to be free from defects in material or workmanship, under normal and proper use and maintenance service as specified by Bakers Pride and upon proper installation and start-up in accordance with the instructions supplied with each Bakers Pride unit. Baker's Pride obligation under this warranty is limited to a period of one [1] year from the date of original installation, or eighteen [18] months from original invoice date, whichever occurs first. Defects that occur as a result of normal use, within the time period and limitations defined in this warranty, will at Baker's Pride discretion have the parts replaced or repaired by Baker's Pride or a Baker's Pride-authorized service agency.

THIS WARRANTY IS SUBJECT TO ALL LISTED CONDITIONS

Repairs performed under this warranty are to be performed by an Bakers Pride authorized service agency. Baker's Pride will not be responsible for charges incurred or service performed by non-authorized repair agencies. In all cases, the nearest Baker's Pride-authorized service agency must be used. Baker's Pride will be responsible for normal labor charges incurred in the repair or replacement of a warranted product within 50 miles (80.5 km) of an authorized service agency. Time and expense charges for anything beyond that distance will be the responsibility of the owner. All labor will need to be performed during regular service hours. Any overtime premium will be charged to the owner. For all shipments outside the U.S.A. and Canada, please see the International Warranty for specific details. It is the responsibility of the owner to inspect and report any shipping damage claims, hidden or otherwise, promptly following delivery. No mileage or travel charges will be honored on any equipment that is deemed portable. In general, equipment with a cord and plug weighing less than 50 lb. (22.7 kg) is considered portable and should be taken or shipped to the closest authorized service agency, transportation prepaid.

CONTACT

Should you require any assistance regarding the operation or maintenance of any Baker's Pride Manufacturing; phone or email our service department. In all correspondence provide the model number and serial number of the unit needing service; include the voltage or gas type.

Normal Business Hours: 8:00 a.m. to 4:30 p.m. Central

Telephone: 800-264-7827 Tech Service Option 2

Email: TechService@partstown.com

WARRANTY EXCLUSIONS**THE FOLLOWING WILL NOT BE COVERED UNDER WARRANTY.**

Baker's Pride sole obligation under this warranty is limited to either repair or replacement parts, subject to the additional limitations detailed below. This warranty neither assumes nor authorizes any person to assume obligations other than those expressly covered by this warranty.

- Any product which has not been used, maintained, or installed in accordance with the directions published in the appropriate installation sheet and/or owner's manual, including incorrect gas or electrical connection. Baker's Pride is not liable for any unit which has been mishandled, abused, misapplied, subjected to harsh chemicals, modified by unauthorized personnel, damaged by flood, fire, or other acts of nature [or God], or which have an altered or missing serial number.
- Installation, labor, and job checkouts, calibration of heat controls, air and gas burner/bypass/pilot adjustments, gas or electrical system checks, voltage and phase conversions, cleaning of equipment, or seasoning of griddle surface.
- Replacement of fuses or resetting of circuit breakers, safety controls, or reset buttons.
- Replacement of broken or damaged glass components, quartz heating elements, and light bulbs.
- Labor charges for all removable and consumable parts in gas charbroilers and hotplates, including but not limited to burners, grates, and radiants.
- Any labor charges incurred by delays, waiting time, or operating restrictions that hinder a service technician's ability to perform service.
- Replacement of parts that fail or are damaged due to normal wear or labor for replacement of parts that can be replaced during a daily cleaning routine, such as but not limited to silicone belts, PTFE non-stick sheets, control labels, knobs, bulbs, fuses, quartz heating elements, baskets, racks, and grease drawers.
- Any economic loss of business or profits.
- Non-OEM parts. Use of non-OEM parts without Baker's Pride approval will void the warranty.
- Units exceeding one [1] year from original installation date, or more than eighteen [18] months from original invoice date, whichever comes first.

ADDITIONAL WARRANTIES

- Specific/chain-specific equipment may have additional and/or extended warranties.

The foregoing warranty is in lieu of any and all other warranties expressed or implied and constitutes the entire warranty.

BUILT BY CRAFTSMEN. TESTED BY TIME.®
